FIRE DETECTION, MONITORING AND ALERTING SYSTEM BASED ON IOT

ABSTRACT

This project has proposed an internet of things based fire alarm and monitoring system which is best suited for industrial and home applications. Hence, detection of fire in time is important so that many lives and property can be saved. It can detect smoke, the rise in temperature, rise in flame etc. We have designed a system and implemented using Aurdino Board which will monitor the environment continuously. The system can be monitored anywhere in the world by using IOT.
