## ABSTRACT

Currently day-to-day technology is drastically improving. Human life becomes measurable and uncertain situation occurs. There is no complete safety measure. People feel distressed and get panic to strange situations, problem may come from any direction such as a person walking on the road after the work, bank etc. In 2013 there happened an incident which is a gang rape in New Delhi in the case of 23 year old women in bus .Not only the Nirbhaya case every week at least 2 to 4 cases are been notified. Unsafe situations are like robbery, extortion, kidnapping etc the victim might women or man.

Our main motto is to help the needy to handle the situation. The common Gadget which everyone carries is smartphone. So we are developing a mobile application which will trace human location through GPS,when he/she is in danger then by simply touching the app will send the message alert along with that GPS location to the emergency like 100 and registered contacts.
